Building Claude-powered Agents for the Generative Engine Optimization category

THE CLIENT

Yozigo AI is a Generative Engine Optimization (GEO) platform. It helps brands understand and improve how they are cited, described, and ranked inside AI-powered answer engines such as ChatGPT, Claude, Perplexity, and Gemini. This is the new surface where enterprise buyers now discover products and services.

IN HIS OWN WORDS

"GEO is moving too fast for manual workflows. GWC helped us bring Claude-powered agents into the core of how Yozigo works, so we can scale coverage without scaling headcount."

Vijayakumar Mathaiyan, Co-founder, Yozigo AI

WHAT YOZIGO NEEDED

- **Prompt coverage at scale:** continuously test thousands of relevant prompts across major LLMs.
- **Reliable interpretation:** understand nuanced answers, not just keyword matches.
- **Actionable outputs:** translate raw visibility signals into changes a marketing team can act on.
- **Enterprise-grade safety:** reasoning that customers, and their compliance teams, can trust.

THE AGENTS GWC BUILT

- **AI visibility monitoring:** runs branded and category prompt sets across major LLMs; captures citations, framing, and sentiment.
- **Competitive share-of-voice:** benchmarks the client's presence against competitors on the same prompts and flags shifts over time.
- **Content optimization:** reads brand content and recommends structural and factual changes that improve how LLMs cite it.
- **Insight and report generation:** turns raw GEO signals into a clean, on-brand narrative ready for the marketing team to act on.
- **Human-in-the-loop review:** customer-facing outputs pass through a review checkpoint before publishing, calibrated to the stakes of each output.

WHY CLAUDE AS THE FOUNDATION MODEL

- **Deep contextual reasoning** over long prompt sets and multi-source citations.
- **Reliable, low-hallucination output** suitable for customer-facing analytics.
- **Tool use and orchestration** across multiple LLMs, data sources, and internal APIs.
- **Enterprise-grade safety and governance** aligned with how Yozigo's customers evaluate AI vendors.

WHAT THIS UNLOCKS FOR YOZIGO

- **Broader prompt and model coverage** without a linear increase in operations headcount.
- **Faster turnaround** from raw signal to customer-facing insight.
- **Consistent, brand-safe outputs** that scale with the customer base.
- **A reviewable, repeatable process** the team can trust with every customer deliverable.

WHY GWC

- **Claude AI partner** for advanced reasoning, document intelligence, and human-in-the-loop decision systems.
- **50+ prebuilt enterprise AI agents** across retail, finance, ops, and customer-facing workflows.
- **Innovation Lab:** a sprint-based build engine (Meaningful, Methodical, Measurable) that ships production-ready agents on a recurring cadence.
- **Full-stack ownership:** data → AI → insight → execution, one partner, one accountability.
