GWC DATA.AI
SOLUTION MATTERS

CLIENT USE CASE
Style Baazar

AGENTIC AI ON DOMO · BUYING, MERCHANDISING & PLANNING

AI Agents for Buying, Merchandising & Planning

For Style Baazar, GWC Data.AI built a purpose-made network of Claude-powered agents on top of the retailer's Domo data, designed around the daily decisions of the buying, merchandising and planning teams. Team-built playbooks watch trading on schedule, raise category insights, and follow every action through to closure.

Buying | Merchandising | Planning | Merch playbooks | Action follow-through

THE CHALLENGE

- Buying, merchandising and planning decisions depend on fast reads of sales, stock and trading data spread across many Domo dashboards.
- Teams spent review time gathering numbers rather than acting on them.
- Decisions and follow-ups agreed between buying, merchandising and planning were hard to track across teams.
- Ad-hoc questions during trading reviews meant waiting on analysts for extra cuts of data.

OUR SOLUTION

- Agents connected to Style Baazar's Domo datasets and dashboards, so numbers stay consistent with what teams already see.
- **Merchandising-specific playbooks** designed by the teams, for example trading performance, sell-through, stock health and category reviews.
- Scheduled runs deliver insights to each team ahead of trading and planning reviews.
- Actions are assigned, tracked and nudged, with chat access to extra data points when a decision needs them.

HOW IT WORKS

01 Domo Retail Data
Sales, stock and category datasets plus the dashboards the teams already use.

02 Team Playbooks
Buyers, merchandisers and planners set their own analyses, thresholds and cadence.

03 Scheduled Reviews
Agents run the playbooks, query Domo and reconcile results with dashboards.

04 Merch Actions
Insights become owned actions, such as reorder, re-allocate, review range or flag markdown.

05 Follow Through
Tracking agents remind owners; chat supplies supporting data to close decisions.

AGENTS FOR THE MERCHANDISING FUNCTION

Merch Playbook Agent
Runs team-designed buying, merchandising and planning playbooks on schedule.

Retail Data & Query Agent
Queries Domo sales, stock and category data and matches results to the dashboards.

Action Tracking Agent
Tracks decisions across buying, merchandising and planning, and flags pending items.

Merch Assist (Chat) Agent
Answers trading questions on demand with extra cuts, data points and context.

BUSINESS IMPACT

Faster Trading Reads
Teams start reviews with insights ready, instead of pulling data together first.

One Version of Truth
Agent outputs align with Style Baazar's existing Domo dashboards.

Cross-Team Follow-Through
Shared action tracking connects buying, merchandising and planning decisions.

Team-Owned Playbooks
Teams change and extend their own playbooks as trading priorities shift.
